

Booking in repairs

1st - Use .R for the first line. This should include the Brand and description of the tool This is how the repair techs search for active jobs in repairs, this gives them an easy highlight who's tool is who's - also its used for our reference so we don't mix up tools.

2nd - The date of purchase and original invoice number should be listed. If not this forces the repairer to do extra searches for information so it wastes time.

3rd - Description of the fault with as much detail as possible

4th - Operator date and that the time unit was booked in. This is because once a job is updated it refreshes the time stamp in ADEN and deletes the original so we then have no idea what date it was booked in so we can view the total time frame for the job.
